

# Invitation

Dear Colleague,

It is our pleasure to invite you to the “Quebec Conference on Abnormal Plasticity in Basal Ganglia: from Dyskinesia to Deviant Behaviour” to take place in Quebec City, Canada, October 12-14 2007.

The Quebec Conference on Abnormal Plasticity in Basal Ganglia will bring together clinicians and researchers from all over the world for 2 days of intensive clinical and scientific interactions. The goal of the Conference is to bridge the complex interplay between mental and motor aspects of Levodopa induced dysfunctions from a scientific and clinical point of view and to honor Professor Paul J. Bédard for his 35 years of involvement in the field of animal research in Parkinson’s disease and dyskinesia.

Clinicians and researchers from a variety of fields including movement disorders, neurology, neurophysiology, neurobiology and cognitive neurosciences are invited to participate and submit abstracts for the Conference.

We hope that you will join this exciting meeting and look forward to seeing you in Quebec City in October 2007.

Emmanuelle Pourcher, Neurologist  
Pierre Blanchet, Neurologist
